Farhan Karim (2311790642)
Faizur Rahman Zunayed (2312137642)

Update-2

Backend:(Done by Safat)

Workspace and Project Management:

- **Create Workspace:** Users can create workspaces with name, description, and color. User is added as owner/member.
- **Get Workspaces:** Retrieves all workspaces where the user is a member.
- **Get Workspace Projects:** Returns all projects in a workspace.
- **Create Project:** Creates projects within workspaces with title, description, status, priority, due dates, and assigned members.

Database models defined with Mongoose: User, Workspace, Project, Task, Comment, Verification.

Frontend:

Workspace and Project Features:(**Done by Farhan**)

- **Workspace List:** Displays all user workspaces as cards with create workspace button.
- **Create Workspace:** Dialog with name, description, and color picker. Navigates to new workspace on success.
- **Workspace Selector:** Dropdown in header to switch between workspaces.
- **Workspace Details:** Shows workspace info and all projects as cards.
- **Create Project:** Dialog to add projects with title, description, status, priority, due date, and member assignment.
- **Project Cards:** Display project info with progress bar, status, and due dates.

Dashboard Layout:(**Done By Zunayed**)

- Responsive collapsible sidebar with navigation (Dashboard, Workspaces, My Tasks, Members, Settings).
- Header with workspace selector and user profile menu.
- Protected routes with authentication check and loading states.

State management with Auth Context and TanStack Query for API calls. Custom hooks (useAuth, useWorkspace, useProject) for data fetching. (**Done by Safat**)

Project structure, routes organized by feature, reusable UI components (Radix UI + Tailwind), TypeScript types, and API utilities with JWT token handling.(**Done by Safat**)
